

SHINGLE RECYCLING IS:

- ✓ Cost effective
- ✓ Widely accepted at centers in North America
- ✓ Reducing landfill waste

A SECOND LIFE

Shingle tear-offs can be taken to recycling centers.

1.05 MILLION TONS
of reclaimed asphalt shingles
(RAS) were used in new
asphalt pavement mixes and
other road-building uses in
U.S. in 2018.*

Recycled shingles are used for various paving projects. They have the potential to contribute to **125,000 MILES** of paved highways annually.*

\$107 MILLION

The amount saved in road construction costs by using RAS in 2018*

WHAT ARMA DOES:

- Members participate and support the advancement of shingle recycling by researching and reporting on other applications of recycled shingle content.
- Work with National Asphalt Paving Association (NAPA) and Asphalt Institute to expand use of RAS in paving.
