

LOW SLOPE ASPHALT ROOFING RECYCLING has great potential to reduce landfill waste

A SECOND LIFE

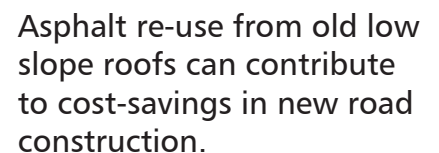

Low slope roof tear-offs can be taken to recycling centers where available.

Hundreds of thousands of tons of low slope asphalt roofing material is available for recycling annually.

Bitumen from recycled asphalt roofing membranes has the potential to be used in many ways, including in road construction and as a valuable component in new membrane manufacturing.

Asphalt re-use from old low slope roofs can contribute to cost-savings in new road construction.

WHAT ARMA DOES:

- Members participate and support the advancement of asphalt roofing recycling by researching and reporting on opportunities for recycling asphalt roofing materials.
- Work with a variety of stakeholders to expand awareness of the opportunity to recycle low-slope asphalt roofing materials.
